Proprietary managed care universe including a patented payer, plan and pbm bridging/ mapping process

Ability to identify and assign every health plan one of >50 different plan model types
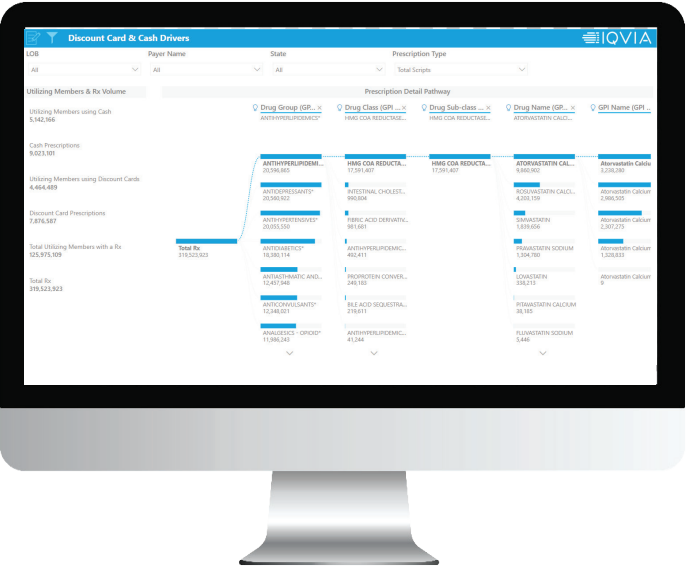

Helping stakeholders address critical business questions

CUSTOMER NEED	CUSTOMER BENEFIT
Determine member utility and understand impact on member patient assistance programs (pharmacy discount cards, manufacturer co-pay cards, other types of cash payments).	**Improve benefit design and member retention strategies** by analyzing detailed activities, trends, and impact of member utilization on out-of-pocket cost offset mechanisms.
Measure and analyze Star Rating impact from member utility of cash payments, discount cards and co-pay cards.	**Improve Medicare Star Ratings by benchmarking member cash and discount utilization** against key competitors allowing for prioritization at the geographic and drug level.
Identify provider fraud, waste, and abuse trends based on prescription activity.	**Isolate fraudulent prescribing activities** by identifying anomalies to support cost savings and provider network strategies.
Perform targeted analysis on specialty drug utilization and trends.	**Enhance benefit design, provider network management and member retention** with pre-defined analytics, configured to markets and geographies of interest to identify performance, member utilization, and provider prescribing trends on expensive, difficult to manage, specialty drugs.
